

AX28R

Automated R2R Exposure Platform

The AX28R is OLEC's reel-to-reel automated exposure system. Like the standard AX28, the AX28R is simple to operate yet employs some of the most advanced features available today.

Versatility

The modular design of the AX28R offers a versatile upgrade path from mechanical registration systems to a sophisticated patented optical registration system. Its open architecture allows a variety of standard configurations including conveyor, reel-to-reel, and cassette. In addition, its sliding doors give greater operator accessibility without the need for additional floor space.

Easy-access programming, point-source optics, and a unique pre-registration conveyor system are but a few of the many additional features that make the AX28 the finest choice for printed circuit fabricators worldwide.

Modular Design

High-resolution Optics

Precision Registration

Automatic Alignment
