

Crush Roller Assembly

OLEC

If you have a UV coating line you will need an OLEC Crush Roller assembly added to your press. This addition will dramatically reduce the spray powder from sticking to your substrates, causing uneven coating, or burn spots from the UV lamp. The crush roller does just what it sounds like, it applies pressure to your substrate so it will ensure only the best UV coat available. So if your coating job isn't consistent with the quality you deserve, then contact us today.
